COMMUNITIES

WHAT WE DO

We use patented electrostatic equipment & nanotechnology to apply our long-lasting solution to mitigate the presence of infectious diseases, mold and fungi for commercial and residential properties.

Our products continue to protect surfaces where people frequently gather in high numbers like medical facilities, public transportation, schools, shopping centers, theaters, gyms, churches, homes and more.

OUR TECHNOLOGY

Our patented ANTIMICROBIAL products use self assembling mono-layers to create an invisible shield of positively charged nanospikes that mechanically kill negatively charged microbes (viruses, bacteria, mold) by piercing and rupturing the cell membrane.

Our EPA registered, FDA approved, hospital grade disinfectant can be applied to non-porous and porous surfaces and are effective against:

- Covid-19
- Influenza A H1N1
- Staph
- E. coli
- Hepatitis C
- Salmonella
- Mold & Fungi
- Stain & Odor causing bacteria

THE DIFFERENCE

- Effective for up to 90 days
- Can be applied to Porous & Non-Porous Surfaces such as wood, plastic, metal, tile, vinyl, fabric, or carpet
- When applied to HVAC filters, infectious diseases in the air are significantly reduced
- Non-Toxic
- Water Based
- Odorless
- Fast Drying
- Spraying at extended intervals saves time & money keeping your environment safe from toxic buildup that results from spraying daily.
